What kind of artifacts were discovered at the Julian monastery?

According to the provided PDF excerpts, at the Jaulian Monastery, the following artifacts were discovered:

1. Coins of the Kushan kings, Huvishka and Vasudeva.
2. A remarkably fine Gandhara statue of the Bodhisattva Gautama (?) in almost perfect preservation.
3. Several terracotta images of the Buddha that had fallen from the niches in the court.
4. A massive steatite seal of the Gupta period belonging to one Harischandra.
5. Over 200 coins.
6. Many iron nails, hinges, and other implements.
7. Copper ornaments.

8. Terracottas.
9. Numerous potteries, including several large store jars.

What is the historical significance of the Dharmarajika Stupa in Taxila?"

The Dharmarajika Stupa in Taxila is historically significant as the first Buddhist structure to be erected on the plateau. It was constructed at a time when the plateau was levelled, and its construction predates

the other Buddhist structures in the area. The stupa has undergone multiple phases of construction and repair, with different types of masonry used in various periods, including the Scytho-Parthian period, the 1st century A.D., the 2nd century A.D., and the 3rd and later centuries A.D.

The stupa has yielded a collection of 28 coins of the Greek king Zoilus, which were unearthed below the foundation of the building H, indicating that the site was previously occupied by a village. The stupa has also produced a hoard of 355 coins, including specimens of Azes II, Soter Megas, Huvishka, Vasudeva, and issues of Indo-Sasanian or Kushano-Sasanian type.

The Dharmarajika Stupa is also notable for its architectural features, including the use of ashlar and diaper masonry combined in the 3rd, 4th, and 5th centuries A.D. The stupa's construction and repair phases provide valuable insights into the history and development of Buddhist architecture in the region.

Can you describe the layout and architecture of the ancient city of Sirkap?

Based on the provided excerpts from John Marshal's Guide to Taxila Vol. 1, the layout and architecture of the ancient city of Sirkap can be described as follows:

The city of Sirkap was founded during the Indo-Greek period in the 2nd century B.C. and remained occupied during the Scytho-Parthian epoch. The city wall, approximately 6,000 yards long, was constructed with rubble stones and varied in thickness from 15 ft. to 21 ft. 6 in. The wall was strengthened by bastions, which were rectangular in plan, and in some cases, further supported by sloping buttresses.

The city wall had an inner line of fortifications along the north side of the Akropolis (a flat-topped hill) and along the base of the northern ridge of Hathial. The only access to the interior fort was provided by a gateway in the depression between the two hills.

The city wall was constructed in a similar style to other structures of the Greek and Saka-Pahlava epochs, with a core and facing composed of rubble stones. The walls and bastions were likely between 20 and 30 feet high, with the bastions built in two storeys, the upper being hollow and loopholed.

Outside the northern wall of the Sirkap city was a suburb known as Babar Khana or the Kachcha Kot, which was defended by earthen walls.

Tell me about the influence of Greek and Buddhist cultures on the art of Gandhara found in Taxila

Based on the provided PDF excerpts, here's a concise summary of the influence of Greek and Buddhist cultures on the art of Gandhara found in Taxila:

The art of Gandhara, as seen in Taxila, was heavily influenced by Greek art, particularly during the Hellenistic period. The region of Gandhara, which includes Taxila, was a crossroads of cultures, and Greek art had a significant impact on the development of Gandhara art. The art of Gandhara was not a direct copy of Greek art, but rather a fusion of Greek and Indian styles, resulting in a unique blend of Hellenistic and indigenous South Asian design.

As mentioned in Chapter III of the guide (page 30), the art of Gandhara became more hybrid, incorporating Indian ideas and motifs, particularly during the Kushan period. The arrival of the Kushans in India marked a new era of artistic activity, and their influence can be seen in the numerous Buddhist monasteries and stupas that sprang up in the region.

The Gandhara School, which flourished during the Kushan epoch, produced a vast number of sculptures that showcased a unique blend of Greek and Indian styles. These sculptures, as mentioned in Chapter III (page 30), have been found in large collections on the frontier and are characterized by their Hellenic inspiration and Indian motifs.

In terms of specific examples, the guide mentions the well-known gold casket from Bimaran in Afghanistan, which features figures of the Buddha and his devotees in a Hellenic style, but with Indian arches and motifs (page 50).

Overall, the art of Gandhara in Taxila reflects a complex interplay of Greek and Buddhist influences, resulting in a unique and distinctive style that blended Hellenistic and indigenous South Asian design.

What does the book say about the ancient university that existed in Taxila?

Unfortunately, the provided PDF excerpts do not mention the ancient university that existed in Taxila. They do provide information on the

history of Taxila, its exploration, and the discovery of its ancient remains, but there is no specific mention of an ancient university.

However, it is worth noting that Taxila is known to have been a significant center of Buddhist learning and culture, and it is often referred to as the ancient university of Taxila. This information is not supported by the provided excerpts, but it is a well-known fact about Taxila.
